

PRODUCT BRIEF

ANALOGUE & DIGITAL TELEPHONE NETWORKS

What to do when today's analogue telephone network will be replaced with a digital fiber optic network? Time scale not confirmed.

If you do nothing none of the lift autodialers connected to a land line will work, - only those connected to a GSM Gateway will function.

SOLUTION:

Connect one of our GSM Gateways to any make of existing autodialer and use a GSM Gateway in all new autodialer installations instead of a land line. Don't wait until it becomes a problem for your company and your clients.

GSM GATEWAY

Regarding using VoIP: European Lift Association ELA says:

"GSM networks support a wider range of traditional forms of voice or data transfer than VoIP, and might therefore be seen as a more reliable form of communication."

We have GSM 2G, GSM 3G, GSM 4G and GSM 4G Router + GSM Autodialer.
